

# ADA Survey & Report Process

## Step 1

### *Establish Inspection Timeframe*

A time & date is set for the survey that is the least disruptive to your normal course of business. Your facility is reviewed by satellite imagery for a precursory review of exterior features to be surveyed.

## Step 2

### *Conduct ADA Survey*

The interior and exterior architectural features of your facility that are included in ADA standards are carefully measured and recorded in a guided survey by qualified ADA advisory experts.

## Step 3

### *Report & Remediation Plan*

The survey results are used to create a comprehensive report of compliance and deficiencies. A detailed remediation plan for correcting deficiencies is produced that includes priorities and construction costs.

## Step 4

### *FL ADA Title III Registry*

If elected, the results of the report and remediation plan are submitted to the FL ADA Title III Registry to show your commitment to accessibility and provide you legal recourse in the event of ADA related litigation.
